

SUMMARY

Software Developer with 4+ years of experience building scalable APIs and production systems using Node.js (Express) and Python (FastAPI). Experienced in designing domain-driven backend architectures across monolithic and microservices environments and optimizing systems handling high-volume workloads. Strong background in database design, testing strategies, and delivering end-to-end backend solutions in collaboration with cross-functional teams.

Technical Skills

Backend: Node.js, Express.js, NestJS, Python, FastAPI, Java

Frontend: React, JavaScript, HTML, CSS

DevOps & Testing: Docker, CI/CD, Nginx, GCP, Linode, Unit & Integration Testing

AI Tools and IDE: Claude Code, ChatGPT, CoPilot, VSCode, AntiGravity, Cursor

Mobile: Android (Java/Kotlin), React Native

Databases: MySQL, PostgreSQL, MongoDB, Redis

EXPERIENCE

Software Developer (Full Stack / Backend-Focused)

Easycom Japan Philippines Inc. | Dec 2024 – Present

- Led backend architecture design using Node.js (Express) and FastAPI, balancing **monolithic vs microservices trade-offs** based on system requirements.
- Owned end-to-end feature development across backend, React frontend, and React Native apps, aligning system design with business needs.
- Managed **production deployments**, including Google Play Store releases and Linode server provisioning.
- Contributed to **CI/CD pipelines and Docker-based deployments**, improving release efficiency.
- Assigned to production support for a **Java-based payment switch (FEP)** processing real-time VISA credit card authorizations via **ISO 8583**, interfacing with **HOST (AS400)** and **HSM** systems.
- Led end-to-end deployment of the **April 2026 VisaNet Enhancement**, including release documentation, production deployment, and database operations.
- Performed production support and maintenance including **incident handling, bug investigation, and system operations** for the FEP environment.

Android Developer (Android / Backend)

Easycom Japan Philippines Inc. | May 2021 – Oct 2024

- Developed **Android (Kotlin)** and **React Native** applications for production use.
- Built and integrated backend APIs using **Node.js (Express)** to support mobile features.
- Designed and consumed RESTful APIs for efficient client-server communication.
- Collaborated across teams to deliver end-to-end features from mobile UI to backend logic.

PROJECTS

Multilingual Real-Time Chat Application

Tech Stack: Node.js (Express), WebSockets, MongoDB, REST APIs, Monolithic Layered Architecture

- Reduced message delivery latency under high concurrency by implementing WebSocket-based real-time communication, eliminating repeated polling and decreasing average response time by ~35%.
- Minimized database load during peak messaging traffic by introducing indexed queries and optimized aggregation pipelines in MongoDB, improving message retrieval performance by ~40%.
- Improved maintainability and decreased feature regression issues by restructuring the backend into a layered monolithic architecture with strict separation of concerns, reducing bug resolution time by ~25%.

Logistics Management Platform

Tech Stack: Python (FastAPI), TiDB/SQL, Microservices , React

- Improved order processing reliability under 9,000–12,000 peak daily orders by designing domain-isolated services using DDD principles, reducing cross-domain coupling and deployment risk.
- Reduced API response time during peak traffic by optimizing SQL queries, adding proper indexing strategies, and implementing pagination for high-volume endpoints, improving performance by ~30%
- Increased system scalability by decomposing order lifecycle logic into independently deployable services, reducing incident blast radius and improving fault isolation.

EDUCATION

BS in Information Technology (Urdaneta City University – 2014-2019)

Urdaneta City, Pangasinan Philippines
