SUMMARY

Full Stack Software Developer with 5+ years of experience building backend systems, APIs, and production applications using Node.js, TypeScript, and Python. Experienced designing modular monolith and microservices architectures using Domain-Driven Design, optimizing high-volume systems, and shipping production software across web, mobile, and payment infrastructure. Passionate about scalable backend engineering, clean architecture, integrating AI-Powered features and AI-powered development workflows.

Technical Skills

Language: Node.js, TypeScript, Python, Java, JavaScript, Kotlin
Frontend: React, NextJs, JavaScript,Typescript, HTML, CSS
Mobile: Android (Java/Kotlin), React Native **Databases:** MySQL, PostgreSQL, MongoDB, Redis
DevOps & Testing: Docker, CI/CD, Nginx, GCP, Linode, Unit, Integration, E2E Testing, Playwright
AI Tools and IDE: Claude Code, ChatGPT, CoPilot, VSCode, AntiGravity

EXPERIENCE

Software Developer (Full Stack / Backend-Focused)

Easycom Japan Philippines Inc.* | *Dec 2024 – Present

- Led backend architecture design using Node.js (Express) and FastAPI, balancing **monolithic vs microservices trade-offs** based on system requirements.
- Owned end-to-end feature development across backend, React frontend, and React Native apps, aligning system design with business needs.
- Managed **production deployments and maintenance** for android applications on Google Playstore.
- Contributed to **CI/CD pipelines and Docker-based deployments**, improving release efficiency.
- Assigned to production support for a **Java-based payment switch (FEP)** processing real-time VISA credit card authorizations via **ISO 8583**, interfacing with **HOST (AS400)** and **HSM** systems.
- Performed production support and maintenance including **enhancements, incident handling, bug investigation, and system operations** for the FEP environment.

Android Developer (Android / Backend)

Easycom Japan Philippines Inc.* | *May 2021 – Oct 2024

- Developed **Android (Kotlin)** and **React Native** applications for production use.
- Built and integrated backend APIs using **Node.js (Express)** to support mobile features.
- Designed and consumed RESTful APIs for efficient client-server communication.
- Handle production deployment and maintenance for android applications on google playstore.

PROJECTS

Multilingual Real-Time Chat Application

Tech Stack: Node.js (Express/Typescript), WebSockets, MongoDB, REST APIs, React

- Reduced message delivery latency under high concurrency by implementing WebSocket-based real-time communication, eliminating repeated polling and decreasing average response time by ~35%.
- Minimized database load during peak messaging traffic by introducing indexed queries and optimized aggregation pipelines in MongoDB, improving message retrieval performance by ~40%.
- Improved maintainability and decreased feature regression issues by restructuring the backend into a layered monolithic architecture with strict separation of concerns, reducing bug resolution time by ~25%.

Logistics Management Platform

Tech Stack: Node.js (Express/Typescript), TiDB/SQL, Microservices , React

- Improved order processing reliability under 9,000–12,000 peak daily orders by designing domain-isolated services using DDD principles, reducing cross-domain coupling and deployment risk.
- Reduced API response time during peak traffic by optimizing SQL queries, adding proper indexing strategies, and implementing pagination for high-volume endpoints, improving performance by ~30%
- Increased system scalability by decomposing order lifecycle logic into independently deployable services, reducing incident blast radius and improving fault isolation.

EDUCATION

BS in Information Technology (*Urdaneta City University – 2014-2019***)**
Urdaneta City, Pangasinan Philippines
